DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-12, drawn to polypeptides, classified in class 530, subclass 350.
 - II. Claims 13, 14, and 21, drawn to a nucleic acid and a host cell, classified in class 536, subclass 23.5 and class 435, subclass 325.
 - III. Claims 15 and 16, drawn to a method for inhibiting tumor cell growth, classified in class 514, subclass 2.
 - IV. Claims 17-19, drawn to an antibody, classified in class 530, subclass 387.9.
 - V. Claim 20, drawn to a method for reducing natural killer cell mediated rejection of a bone marrow graft, classified in class 514, subclass 2.
2. The inventions are distinct, each from the other for the following reasons. Inventions I, II, and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP §806.04, MPEP §808.01). In the instance case, the different inventions are drawn to completely different products having completely different structures and biological functions which are not interchangeable and which require non-cohesive searches and considerations.
3. Inventions III and V are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP §806.04, MPEP §808.01). In the instance case the different inventions are drawn to completely different

Art Unit: 1646

methods each having completely different method steps and outcomes. Thus, the two methods are exclusive and require non-cohesive searches and considerations.

4. Invention I is related to Inventions III and V as product and process of use. The invention can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP §806.05 (h)). In the instance case the peptide may be used in a materially different process such as to immunize with.

5. Invention II is unrelated to Inventions III and V; Invention IV is unrelated to Inventions III and V. The different inventions are drawn to distinct product and method inventions.

6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

7. Because these inventions are distinct for the reasons given above and the search required for a single group is not required for any other group, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48 (b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48 (b) and by the fee required under 37 CFR 1.17 (l).
